

Caravan mover solutions

After a long journey, unhitching and pitching a caravan by hand is a task many owners don't look forward to. With considerable weight and limited handholds, even a single-axle caravan can be cumbersome to move. Parvalux drive systems are the first choice for leading caravan mover manufacturers.

custom drive wheel

custom chassis integration

PMDC & BLDC motors available

high torque

Whether your requirement is for single or twin-axle caravans, our range of caravan mover solutions can operate safely in a myriad of environmental conditions, allowing your customer to manoeuvre their caravan on any surface, across any terrain - including snow, gravel and sand.

Our range of highly efficient, lightweight solutions allow even heavyweight caravans* to climb inclines of up to

15%. We offer both PMDC and BLDC motors, as well as a wide range of compatible accessories that enable intelligent control of your caravan mover system.

The Parvalux engineering team are well-versed in creating fully custom caravan mover solutions from scratch, and can even design the drive wheels that enable the integration of our geared motor to the caravan's tires.

* Max. 2200 Kg (single-axle) / 4000 Kg (twin-axle) total weight
